

SAFETY / SPEED / SAVINGS

"With my own two eyes, I witnessed a 27" manhole being cut out, removed in one piece (grade rings and all), reset, and finished to grade with the tolerance of a paper business card in less than an hour."

Tom Herlihy
(Union Sanitary District)
Union City, CA

The E.J. Prescott Team has now partnered with The Mr. Manhole System to become the exclusive distributor for the system in Indiana, Ohio, New York, Connecticut, Rhode Island, Massachusetts, Vermont, New Hampshire and Maine. This partnership will provide a wider base of support for customers in these areas.

Manholes in Maine will never be the same! Mr. Manhole recently traveled to the corporate office of Everett J. Prescott, Inc. (Team EJP) in Gardiner, Maine. The Mr. Manhole team demonstrated the World's First Standardized Manhole Chimney Replacement System. Two manholes were repaired in under one hour with both opening to traffic the next day. The demonstration was well attended by representatives of the Maine Department of Transportation, local municipalities, construction companies and EJP, Inc. employees. Those in attendance were excited about the quality and speed of the repair. A video of the demonstration may be viewed at www.mrmanhole.com/EJP.

New Partner for Mr. Manhole

The fully engineered Mr. Manhole system is the World's First Standardized System for replacing/repairing manholes. The system addresses two major issues facing municipalities today – the leakage problem and the bump or structural problem. With the Mr. Manhole System the leak is eliminated and the repair is always level with the road, eliminating the bump. With repairs being completed in under one hour the labor savings combined with material savings and increased worker safety, makes the Mr. Manhole System the smart choice. The system comes with a full length training DVD that covers every aspect of manhole chimney repair. On site training is available.

The Mr. Manhole System is a modular system, that can be used with various attachments. Underslung Adapters allow the device to cut down to 28" in diameter (great for water valves!). SuperLooper Teeth allow the device to perform cuts for traffic loop systems. Milling Teeth are available to quickly perform milling around manhole castings. The Mr. Manhole System works great for repaving operations and new construction. The system is being used by pavers, contractors and municipalities all across the United States and even in Europe.
